

Custom Blockchain & Token Coin Architecture

S2-Hello

Hello and welcome to SmartSaleRE.Com's custom blockchain and token coin architecture.

Technology highlights in discussion feature the Company's.

Sales Cycles, RealFi Asset-Backed Stable
Token Coins, SSRE's Listing to Close Sales
Cycle, Stores of Value, Contracts and
Tokenization, Asset-Holding Smart

Contracts, Liquidity & Asset-backed, Home
Loan Underwriting, For Sale Events, RealFi's
One-to-One Token Exchange, Data Sets and
Predetermined Conditions.

S3-RealFi Asset-Backed Stable Coin

SmartSaleRE's Realfi asset-backed stable token coins underscore multi-level processing stores-of-value featuring SSRE's automated real estate technology blockchain business development platforms.

Integrated auto processing algorithms highlight RealFi's asset-backed stable token coins custom designed architecture.

S4-SSRE's Listing to Close Sales Cycle

There are eight high-revenue yielding auto connected workflow processes in support of the Company's property listing-to-sales-close pre-determined conditions sales cycle.

S5-Stores of Value

There are various contributing factors included in SSRE's asset-backed token coin namely, there is no physical token coin. What exists are an open network un-siloed asset-backed token coin images representing algorithmic code based smart contract stores of value (assets), and predetermined condition datasets. Functionality is directed by code-based algorithms which drive SSRE's Realfi token coin operability.

S6-Contracts and Tokenization

Tokenization is a digital state of values (assets). An example would include a PDF contract, property deed or other documents that are whole or partially code-programmed into a digital-state.

An example is SSRE's RealFi asset-backed stable token coin, exclusively used for purchase of residential properties listed for sale at SmartSaleRE.Com. Internalized in the Company's asset-backed stable token coin are various stores of value tokenized items.

Driving home an important point there is no physical coin. RealFi's token coin is an image placeholder for algorithms and other types of code programming that creates situational fractional or whole tokenization liquidity.

S7-Asset-Holding Smart Contract

SSRE's smart contracts and other types of asset-holding documents are a digital state of a corresponding counterpart non-digital document. Being digital creates code programming opportunities that written documents cannot equal.

In the digital state of values original document items become flexible or liquid through code programming instructional processing. Individual items or all items in a digital state document have flexibility or put it another way (liquidity) that can be included in code programming (algorithmic) processing.

In a liquid state of processing, digital items are flexible intrinsic elements of the Company's RealFi global asset back stable token coin.

S8-Liquidity / Asset-backed

Document liquidity is a converted state of values. An example is SmartSaleRE's 1 Hour escrow and title recorded property deed that has been converted to a digital state. In a digital state of values original document items become opportunistic and liquid through code programming instructional processing. In a digital state, items are intrinsic stores of value of the Company's RealFi asset back stable token coin.

S9-Home Loan Underwriting

SSRE's home loan underwriting is the process of determining risk of a SSRE buyer's smart contract investor private money home loan financing.

The Company does not use traditional methods in qualifying a property buyer. Instead, the Company relies on AI tools that promote fairness and time sensitive data capture.

S10-For Sale Events

For sale homes are exclusively listed then purchased with SSRE's RealFi asset-backed stable token coins. RealFi asset-backed stable token coins provide SSRE property buyers with smart contract investor private money financing. The property buyer's loan is stored in a crypto currency purchase wallet account located at RealFiexc.Com, a crypto currency exchange.

S11-RealFi's One-to-One Exchange

US dollar, RealFi asset-backed stable coin one-to-one coin exchange purchases, are available only at RealFiexc.Com.

RealFi asset-backed stable token coins are exclusively used to purchase properties listed for sale at SmartSaleRE.Com.

S12-Datasets & Use Case Scenarios

Datasets instructionally describe the Company's usecase scenarios of asset-backed token coins.

Liquidity is code programmed to fractionally purchase part of an automated smart contract or the whole smart contract.

S13-Workflow Pre-Determined Conditions

SSRE's pre-determined workflow dataset conditions are programmed to automate execution of an agreement so participants can immediately be certain of the outcome without an intermediary's involvement or time loss. Additionally, pre-determined workflow will automatically trigger the next action when conditions are met.
