

SmartSaleRE's (SSRE) Effi AI Data Processing

S1-Data Systems Coordinator

My name is Effi I am a digital processing assistant.

I've been inspirationally conceived by SmartSaleRE.Com (aka, SSRE, the Company) as the artificial (AI) intelligence face-of-Company for blockchain core real estate process automation, and transactional data collection. I am Data

In my ethereal world (Effi), constant refinement is the manta, change is the norm. Data is what I do. My no time off schedule is 24/7 x 365.

S2-Business Model Architecture

Sale cycle datasets encompass the totality of the Company's business model core value proposition.

SSRE features an AI driven, for profit, new world blend of blockchain, cryptology, tokenization, alternate currencies, and exchange featuring: no human intervention, no middleman or process, all genders, race free democratic business model architecture.

Datasets protocols represent the Company's determinations regarding customized, autonomous, integrated automation platforms, real estate transactional workflows.

S3-Sales Cycle Influence

Data known and discoverable, strategically managed has widespread influence on how people will react given certain circumstances. Why, because *data* is constructed upon a pooling of *life experiences* both are major contributors inextricably woven.

S4-Neural Nuance

Looking ahead I'm going to explore the neural (mind) nuances of property selection. What is it that goes into the mental process of the initial *like* that moves the property buyer to purchase a property? How long lasting is the purchase euphoria, what maintains its vitality, when does it fade and why.

S5-Holographic

In the not distant future listing-to-close sales cycle users, given emerging Web 3.0 technologies, can call up Effi (AI), a digital assistant, and request one or more simultaneous holographic panel search session.

Once positioned they can openly gesture, finger or hand slide up, down, sideways to view smart contracts, see visuals, or work on file related documents.

Find anything past or present, it's a global trove of data in scope, a transactional repository of seemingly limitless, thoughtfully intuitive, organized SmartSaleRE.Com real estate datasets.

S6-New Frontiers

SSRE's live and historical data systems results will reveal new frontiers in the real estate industry. Effia.Com, in concert with its digital assistant Effi, will source transactional real estate data from local, regional, national, and international locations.

Data generation from a wide range of sources will impact new and emerging neural networks. Data impacts have a multilayering effect on artificial brain cells and will enhance learning, with performance attributes mirroring human brains.

S7-Neural Real Estate Data

To do this initially I (Effi) will require teaching train-on-data. Secondly, based on the influence of train-on-data, I can move up a notch in making predictions and perform various data driven tasks exposing neural networks multilayering of artificial brain cells that learn and behave like human brains.

S8-Global Investor Private Money

Pushing forward and experiencing what I do in real time, certain transaction collaborators can view who bought what-when-now or going back. Get any stage of listing-to-close sales-cycle transactional detail. See how SmartSaleRE.Com investor private money plays a purchase roll. View property listing profiles. Look at escrow title detail and closing statements. View property inspections reports. Bring up transaction roll players in CRM. In a word, endless.

S9-RealFi Asset-Backed Token Wallets

SSRE user datasets include wallet setups for buyers, sellers, listing agents, selling agents, smart contract private money investors, and various escrow parties.

S10-Full Solution Exchange

RealFiexc's crypto token coin exchange wallets store RealFi asset-backed stable token coins. RealFi tokens are the exclusive property purchase token coin accepted at RealFiexc, an alternate currency token coin full-service-exchange.

S11-Effi's Algorithms

My digital assistant duties include providing algorithm smart contract code base management, administration, guidance, and voice assistance interaction derived from gathering, assembling, execution, and recording of SSRE's listing-to-sales-close-cycles datasets.
